SUMMARY

CRM Analyst with a foundation in dataflow management, dashboard creation, and analytics recipes and bindings. Proficiency in CRM Einstein Analytics (Tableau CRM/CRM Analytics) tools for efficient data analysis and integration across modules. Collaborated in the understanding of the analytical requirements.

WORK EXPERIENCE

Apple | Technical Expert | Edison, New Jersey

Jan 2025 - Current

- Lead advanced technical troubleshooting and complex repair diagnostics for Apple devices.
- Serve as an escalation point for complex hardware and software cases beyond standard triage.
- Recognized for leadership presence on the floor, mentoring technical specialists, and supporting escalation resolution to maintain operational flow during peak traffic.
- Drive operational excellence by ensuring repair accuracy, turnaround efficiency, and quality compliance.
- Strengthen customer trust by delivering expert-level guidance on repair options and Apple services.
- Introduced workflow improvements within repair intake and triage processes, enhancing efficiency and reducing repeat visits.
- Maintained top-tier customer satisfaction metrics while managing complex diagnostics and high-volume service environments.
- Demonstrated innovation by proactively identifying recurring technical trends and collaborating with leadership to improve service execution strategies.

Apple | Technical Specialist

Jan 2025 - Current

- Deliver personalized customer experiences by identifying needs and recommending solutions by conducting in-depth analysis and diagnostics to resolve technical difficulties efficiently.
- Provide exceptional technical support and troubleshooting for complex systems, software, and Apple products, including iPhones, iPads, and accessories.
- Assist customers with diagnosing software and hardware issues, offering solutions, and educating them on product features.
- Collaborate with the fellow Genius Bar team members and other Apple team members to enhance service efficiency.
- Maintain a high level of product knowledge to stay up-to-date with Apple's latest innovations and support policies.

Apple | Sales Specialist

Sept 2024 - Jan 2025

- Deliver exceptional customer service by guiding clients through product features and benefits, ensuring a personalized shopping experience.
- Collaborate with team members to maintain organized and visually appealing product displays, enhancing overall sales performance, and stay updated on Apple technologies to address inquiries effectively.
- Stay updated on the latest Apple technologies and trends to effectively address customer inquiries and provide tailored solutions.
- Engage with customers to understand their needs, recommend appropriate products and services, assist with purchases, and offer device setup support.
- Foster customer loyalty by building connections, resolving issues, and consistently achieving a 100% satisfaction rating through product knowledge and efficient services.

OzaIntel LLC | Data Analytics, Developer

March 2023 - Sept 2024

- Implemented the Salesforce Einstein/Wave Data Analytics framework to develop a comprehensive sales forecasting solution. Forecast accuracy increased because of this endeavor, which also made proactive decision-making based on real-time data possible.
- Worked closely with the aspects of CRM Analytics, including dataflows, recipes, dataset architecture, external connectors, dashboard design, action framework, bindings, and SAQL. This enhanced accuracy empowered the sales team to make more informed decisions, leading to an increase in sales revenue within the first quarter of implementation.
- Tailored CRM features to the unique requirements of the company to improve data accuracy, improve workflow, and eventually spur business expansion through improved visualization.
- Demonstrated proficiency in utilizing analytics tools for dashboard creation and initiated dashboard creation, translating complex data into visual representations to identify trends and opportunities.
- Enhanced existing dashboards based on feedback and evolving analytics requirements for the ease of visualization.
- Exhibiting adaptability by quickly learning and implementing new features with the CRM Analytics platform.
- Implemented ETL processes to enhance data integration by transforming raw data with accuracy and efficient transformation, which decreased data errors, enabled faster decision-making, and improved data reliability across systems.
- Proficiently execute data extraction processes within CRM systems, ensuring retrieval of data.

Atlantis Travel Consultants | IT Professional

Apr 2022 - Feb 2023

- Leveraged the Salesforce Data Analytics Platform to provide business intelligence solutions tailored to client needs. As a result, the client Executives gained real-time insights into sales performance, customer behavior, and market trends.
- Gathered data and developed comprehensive dashboards using CRM Analytics, enabling executives to make data-driven decisions with ease.
- Worked with queries, handled data integration, and designed workflows within the Einstein Analytics (Tableau CRM/CRM-Analytics) platform. scheduling and regularly monitoring data flows to ensure accuracy in datasets.
- Understanding business requirements from the customer, implementing the data strategies, creating analytical recipes and dashboards to enable visualization, and working closely with them boosted data processing efficiency and accuracy in data analytics jobs.
- Contributed significantly to the testing and project implementation, which shortened the implementation period and increased project efficiency.
- Utilized binding techniques to streamline data integration processes, resulting in a reduction in data transfer errors and improved data consistency across systems.

PROJECT EXPERIENCE

Reel — YouTube Video Summarizer

- Developed a tool that takes a YouTube URL and generates a structured summary, including an overview, target audience, and 5–10 key points.
- Tied each key point to a specific timestamp in the video for easy navigation and reference.
- Built a custom text classifier trained from scratch on a self-built labeled dataset to predict video category from the transcript.
- Implemented a confidence score alongside each category prediction to indicate model certainty.

F1 Qualifying Performance & Race Outcomes

- Conducted a statistical study on 7,134 F1 race entries (2000–2024) to test how strongly qualifying position predicts race outcome, finding a Spearman correlation of 0.785.
- Found drivers finished within an average of 3.06 places of their grid slot, with podium rates of 73.93% for Top 3 starters versus just 1.86% for P11+.
- Built an interactive Streamlit dashboard using Plotly for exploring performance trends by team, driver, and era.
- Utilized Python, Pandas, SciPy, and scikit-learn for data processing, statistical analysis, and modeling.

DEMI – Data-Driven Employee Attrition Intelligence System

- Designed and developed an AI-driven employee attrition prediction system using the IBM HR Analytics dataset.
- A production-ready Flask web application implementing Fitted Q Iteration (FQI) offline reinforcement learning for predicting employee attrition risk and recommending targeted retention interventions.
- Conducted exploratory data analysis using correlation analysis (Pearson S Spearman), feature importance ranking, and behavioral segmentation.
- Improved predictive interpretability by analyzing key drivers such as overtime, job role, satisfaction level, and compensation.
- Structured the project with real-world HR intervention framing, bridging machine learning with business decision strategy.

FOOD APPLICATION

- Developed an Android application that lets users search for recipes to lessen staff workload and provide everyday access to nutritious, home-cooked meals.
- Identified an untapped market opportunity for recipe-based search and optimized user journey for seamless purchasing of ingredients from an eCommerce platform.
- Implemented filters for personalized content and recommendations as well as tailored the app experience to individual user preferences and history.
- Used CRM analytics to gather user data on user interactions within the app.

EDUCATION

Stevens Institute of Technology

Masters of Science in Data Science,

May 2027

University of Mumbai (Malini Kishor Sanghvi College of Commerce and Economics, Mumbai, India).

Bachelor of Science in Information Technology,

April 2022

Diploma in Digital Technology and Media

2020

COURSES AND CERTIFICATIONS

Salesforce CRM Analytics, IBM Data Science (Ongoing), Google Data Studio- Google, The Python Bible | Everything you need to program in Python—Udemy, The Fundamentals of Digital Marketing—Google, Certified System Architect—Pega Academy

SKILLS

Tools & Technologies: Python, JavaScript, SAQL, HTML, CSS, Salesforce CRM, Salesforce Einstein/Wave Analytics, scikit-learn, Pandas, NumPy, SciPy, Flask, Streamlit, Plotly, Tableau, Power BI, Salesforce CRM Analytics, Microsoft Office (Excel, Word, PowerPoint)

Skills: Strong problem-solving, strong attention to detail for error identification, data manipulation, troubleshooting, customer satisfaction, advertising, customer service, multitasking, leadership, communication, and adaptability and agility.
